

Colour Flame Projectors

Colours and flames are always an impressive effect, no matter how you use them! To date, FireOne is synonymous with fireworks displays made up of hundreds or thousands of shells that light up the sky. FireOne's contribution to the pyrotechnics industry is quite intricate and elaborated, not only because fireworks offer diverse effects by themselves, but also because FireOne enhances these displays with stunning computer-controlled effects.

FireOne, the leader in the industry, present a new concept for the entertainment/fireworks industry.

FireOne *Flames*

The colour flame projectors are a FireOne Malta brand new invention. These flame projectors are controlled by DMX 512 signals and are equipped with multicolour flame oil.

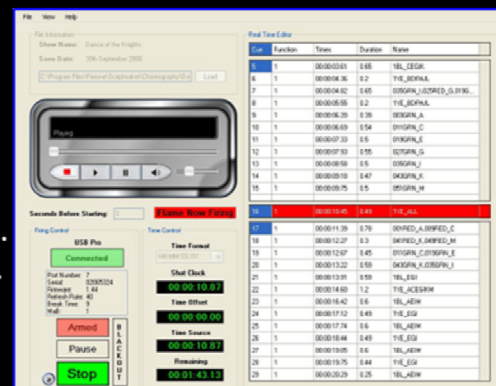

Each colour flame projector can produce four different flames which can be automatically switched from within the software. These flame projectors are unique, due to the fact that they are the only flame projectors available on the market that give the possibility to use the household LPG gas together with other color flames within the same show.

The height of flame reaches between 1.5 meters and 3 meters (5ft to 10ft). The machine is portable, economical and flexible. Besides that, the inner double insurance circuit also prevents the choreographer from losing the control of the show. Therefore, it is safer and more efficient than any other flame projector on the market.

FireOne Flames Features

- ✓ Automatic ignition via an electric discharge, thus no need of pilot-lamp.
- ✓ Built-in safety switch.
- ✓ Operates on either 120V or 240V.
- ✓ DMX 512 Control.
- ✓ Portable.
- ✓ Height of flame reaches between 1.5m and 3m (5ft to 10ft).
- ✓ Can be used both Indoor and Outdoor.
- ✓ Choreography is performed from FireOne ScriptMaker Visual.
- ✓ FireOne Flames software can be used to control also LED Par.
- ✓ Colour Oil available in safe aerosol cans.
- ✓ Flame Projector operates also with LPG gas.
- ✓ Delay of flame is calculated automatically from software.
- ✓ Colour Usage reports for every individual flame colour.
- ✓ Almost smokeless.
